

Install Java 11 by running the following command in the terminal:  
`sudo yum install java-11-openjdk-devel`

Download the SonarQube 7.7 distribution from the official website (<https://www.sonarqube.org/downloads/>).

Extract the downloaded distribution to a directory of your choice using the following command:

```
tar xzf sonarqube-7.7.zip
```

Download the package again from the official website (<https://www.sonarqube.org/downloads/>):

```
wget https://binaries.sonarsource.com/Distribution/sonarqube/sonarqube-7.9.6.zip
```

Extract the downloaded package:

```
unzip sonarqube-7.9.6.zip
```

Move the extracted directory to /opt using the following command:

```
sudo mv sonarqube-7.7 /opt/sonarqube
```

Configure the database connection settings by editing the sonar.properties file using the following command:

```
sudo nano /opt/sonarqube/conf/sonar.properties
```
